**Report To Be Issued in Early July Assessing Root Cause Analysis
of Kingston Fossil Plant Ash Spill**

The TVA Office of Inspector General, TVA OIG, will issue a report in early July assessing TVA's root cause analysis and the management practices that likely contributed to the coal fly ash spill at the Kingston Fossil Plant on December 22, 2008. The TVA OIG review of TVA's report will evaluate the conclusion drawn in the report and will present an objective perspective from a nationally known engineering and consulting firm on the findings of TVA's consultants.
